

REIMAGINING ARCHITECTURE

MAKING HERITAGE ALIVE

Architecture is not just about designing buildings. It's about creating spaces that inspire and captivate people. Our heritage sites are a testament to the rich cultural and architectural history of our world. But as times change, so do our needs and expectations from these spaces. This raises a pertinent question - how can we reimagine architecture to bring our heritage sites to life?

Adaptive reuse is the practice of repurposing an existing building or structure for a new use, rather than demolishing it and building something new. Through lecture demonstrations, the experts will showcase adaptive reuse practices from colonial bungalows of Kolkata (Rajbaris) and Imperial Bungalows of New Delhi along with international best practices from around the world. They will share insights and experiences of working with both heritage sites and everyday mundane buildings transforming the traditional urban fabric. The presentations will be followed by a panel discussion.

Join us to explore spaces and places that keep our cities inspiring and thriving.
